

Trellis - The backward procedure:

1. Initialization :

$$B_i(T+1) = 1, \quad 1 \leq i \leq N$$

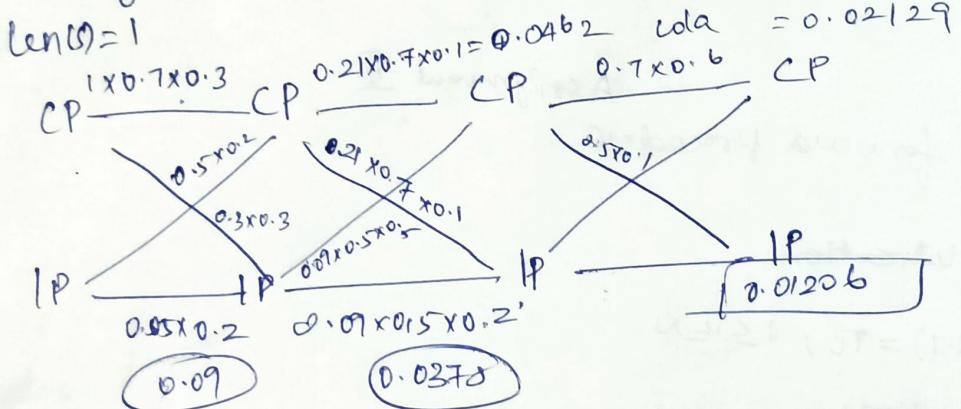

$$\frac{\alpha_{CP(i)} \times B_{CP(i)}}{\alpha_{CP(i)} \times B_{CP(i)} + \alpha_{IP(i)} \times B_{IP(i)}}$$

Assignment III CSE425

Trellis Algorithm

Forward algo:

$$\alpha_{IP(i)} = 1$$

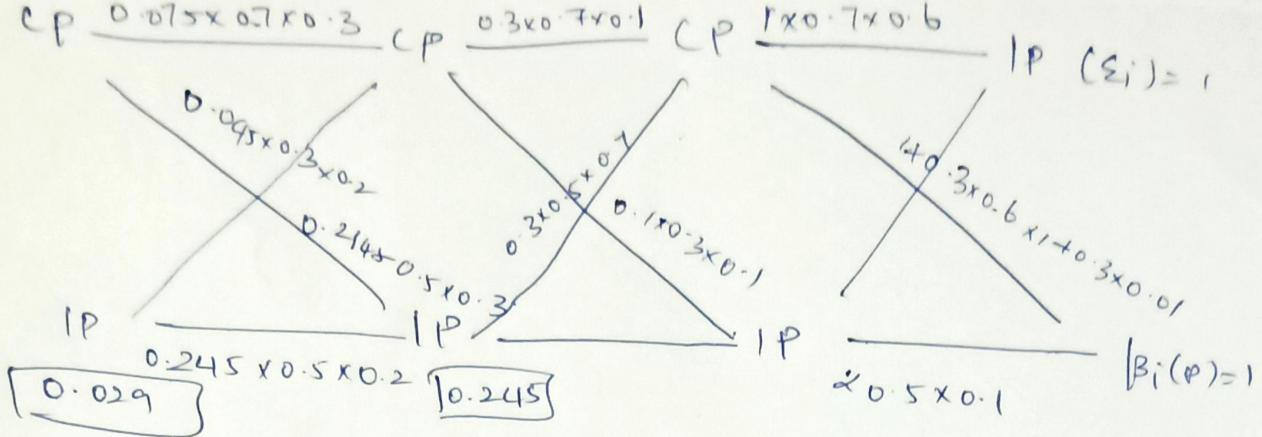

$$P(h_i, i_u, \text{cola}) = 0.631496\%$$

Backward algo:

$$i) B_i(T+1) = 1$$

$$ii) B_i(t) = \sum_{E=1}^N \alpha_{ij} b_{ij} \alpha_{fj} B_j(t+1)$$

$$iii) = \sum_{i=1}^N \pi_i B_i(1)$$

$$P(\text{lime}, \text{Ple}, \text{wta}) = 1 \times 0.0315 \times 0.009$$

$$= 0.0315$$

$$\gamma_{CP(1)} = \frac{\alpha_{CP(1)} \times \beta_{CP(1)}}{\alpha_{CP(1)} \times \beta_{CP(1)} + \alpha_{IP(1)} \times \beta_{IP(1)}}$$

$$\alpha_{CP(1)} = \frac{1 \times 0.031}{1 \times 0.0315 + 0 \times 0.29} = 1$$

$$\gamma_{IP(1)} = \frac{0 \times 0.029}{0.0315 + 0 \times 0.029} = 0$$

$$\gamma_{CP(2)} = \frac{0.21 \times 0.045}{0.21 \times 0.045 + 0.09 \times 0.245}$$

$$= \frac{0.00945}{0.0315} = 0.311$$

$$\gamma_{CP(3)} = \frac{0.042 \times 0.3}{0.0462 \times 0.3 + 0.1 \times 0.00378}$$

$$= \frac{0.01386}{0.01764} = 0.755$$

$$\gamma_{IP(2)} = \frac{0.09 \times 0.245}{0.21 \times 0.045 + 0.07 \times 0.25} \\ \leq 0.7$$

$$\therefore \gamma_{IP(3)} = \frac{0.0462 \times 0.3}{0.0462 \times 0.3 + 0.1 \times 0.00378} \\ = 0.01764$$

$$\gamma_{IP(4)} = \frac{0.2129 \times 1}{0.02129 \times 1 + 1 \times 0.010261} \\ = 0.6711$$

$$\gamma_{IP(4)} = \frac{0.010261}{0.02129 \times 1 + 1 \times 0.010261} \\ = 0.3211$$
